TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, HTML/CSS, C, SQL

Frameworks/Technologies: React, Node.js, JavaFX, Fabric API

Databases/Backend: PostgreSQL, Supabase, REST APIs

Tools/Testing: Git, GitHub, Gradle, Vite, Jira, JUnit, Vitest

EDUCATION

Rutgers, The State University of New Jersey - New Brunswick, NJ

B.A. in Computer Science, Minor in Music Technology | May 2026

Activities: RU COGS (Creation of Games Society)

PROJECT EXPERIENCE

Rooted, Garden Planning App | January 2026 - May 2026 | <https://rooted-blush.vercel.app/>

React, JavaScript, Supabase, PostgreSQL, Vite

- Built and deployed a full-stack React garden planning application with user authentication, persistent user data, and PostgreSQL-backed storage through Supabase.
- Developed a searchable library of 40+ plants with companion-plant recommendations and 7 care attributes, including watering, sunlight, maintenance, germination, planting depth, growth cycle, and growing season.
- Integrated Open-Meteo geocoding and forecast APIs to generate daily location-aware watering and frost reminders based on local precipitation and temperature.
- Contributed to a 120+ commit codebase on a 5-person Agile team using Jira, GitHub branches, code reviews, and automated testing, while producing weekly sprint demos and technical documentation.

Adventure Catalyst, Minecraft Mod | October 2025 - *present* | <https://adventurecatalyst.net/>

Java, Fabric API, Gradle, Git

- Implemented 10+ custom gameplay systems in Java using the Fabric API, including stateful items, rope/projectile mechanics, enchantments, timed status effects, and multiplayer-aware interactions for a mod with 850+ downloads.
- Built persistent item and block behavior using NBT data and custom state properties to manage progression, placement behavior, and state changes across gameplay lifecycles.
- Participated in feature brainstorming, design iteration, and code review, contributing both technical implementation and creative input to new gameplay systems.

RU Scary Burger, Restaurant POS App | March 2025 - May 2025

Java, JavaFX, Android Studio, JUnit, Gradle

- Built a Java/JavaFX restaurant POS application supporting menu selection, dynamic order updates, order management, and a mock database layer.
- Designed the application architecture with UML class diagrams before implementation.
- Wrote JUnit tests to verify application logic and used Gradle, JavaDocs, GitHub branches, and merge-conflict resolution throughout development.

WORK EXPERIENCE

Franklin Steakhouse and Tavern | Fairfield, NJ

Server | July 2026 - *present*

Host | August 2020 - *present*

- Promoted to Server in July 2026 while continuing Host responsibilities, managing high-volume table service, POS order entry, payments, reservations, and guest seating.
- Train new employees, perform opening and closing duties, and coordinate with front- and back-of-house staff to resolve guest issues and maintain efficient service.
